

The benefits of a full strip-down boiler service

It is vital that all your business gas appliances are serviced and certified annually by a registered Gas Safe engineer. Failing to do so could endanger lives – you could also be liable to prosecution under the Gas Safety (Installation and Use) regulations 1998.

A service by Bluewater Plumbers provides a full strip-down of your appliance and a safety inspection of your flue to ensure you comply with current regulations. It also helps avoid breakdowns and ensure your equipment is safe and running to manufacturer's requirements.

Our full boiler service in detail

✓ Identifying your needs

We explain gas safety regulations and look at the efficiency of your appliances.

✓ Inspecting the condition of your appliances

Including construction and fixings, ignition, flame picture, controls, devices and valves, flues, combustion chamber/ heat exchanger/ heating body, mains cable and isolator, associated electrical equipment, ventilation and gas pressure.

✓ Conducting the service

Including checking, cleaning, lubricating or adjusting the burners and pilots, ignition system, combustion chamber/ heat exchanger, flues and flueways, safety devices and valves, manual and automatic controls, integral electrical controls.

✓ Checking and testing the overall performance

Including appliances and associated pipework, earth connections, pilots and burners, flame picture and ignition, manual and automatic controls, location of the thermocouple, pilot and electrodes, ancillary controls and general position and stability.

We also carry out a combustion analysis, note the results on a gas safety record and wipe down the appliance, cleaning and clearing the area we've been working in.
